

## **Annual Maintenance of Safe-T-Punch™ Products**

Safe-T-Punch™ emergency exit punches can be verified at any time without needing to remove them or damage the window in any way. As part of a 12 month maintenance schedule we make the following recommendations.

### **Safety Tag**

Every 12 months we suggest the replacement of the plastic safety tag to ensure secure fit and correct operation. While this is being done, we suggest verifying the action of the Safe-T-Punch™ itself.

### **Safe-T-Punch™**

Once the tag is removed, the punch can be checked for free movement and tapped gently to hear the impact tip touching the glass. The movement should be positive and easy to achieve.

### **Instruction Decal**

If the instruction decal requires replacing due to sun damage, fading or physical damage. Peel the old sticker off and clean any remaining adhesive with an alcohol based solvent. Allow it to dry thoroughly before fitting the new decal in place.

### **Please Note:**

Verifying the smooth action of the Safe-T-Punch™ can be done at any time simply by rotating the safety tag and the red button by hand. This will ensure there is nothing foreign impeding the action of the Safe-T-Punch™. The manufacturer recommends daily visual inspection of tag, device and decal.
